

June 1<sup>st</sup>.

Opse.

Tuesday

Soffit Arch.

Today continued programme of cramping here. Information concerning cramps placed today will be found in Cramp Chart. Personally am cramping in section 34<sup>35</sup>. Yesterday I finished cramping the very bad area contained in this section. The ~~cramping~~<sup>smoothing</sup> of the soffit is going and is advancing rapidly.

Last night we saw the colour films taken last year. My opinion is that they are a great success and the best colour record one could wish for, the colour being quite true. The focusing of the mosaics themselves could perhaps

have been bettered, and no doubt  
will be so by experiment and  
our experience of last year. How  
ever the films of the technique  
are all one could wish <sup>for</sup> and I  
do not think they could be  
improved upon.
